EDUCATION

BSc (Hons) Computer Science - *University of Salford* | Predicted **First Class (1:1)** | 2023–2027

Relevant modules: *Data Structures & Algorithms, Object-Oriented Programming, Software Engineering, Database Systems, AI & Data Mining, Deep Learning*

EXPERIENCE

ElvenDev | Freelance Full-Stack Developer | 2023–Present

- Co-developed and deployed production web applications for a client using Next.js, with a focus on performance, accessibility and maintainability.
- Worked across frontend and backend development, collaborating on requirements, implementation and deployment.
- Implemented server-side rendering, automated email workflows, image optimisation and incremental static regeneration.

Wingstop, Salford | Team Member | 2025–Present

- Support high-volume service operations while maintaining accuracy, communication and coordination during peak periods.
- Develop teamwork, prioritisation and problem-solving skills in a fast-paced environment.

McDonald's, Leigh | Crew Member | 2021–2024

- Delivered customer service in a high-volume environment while coordinating effectively with team members.
- Developed communication, adaptability and problem-solving skills through fast-paced operational work.

PROJECTS

CortexTree | Next.js, TypeScript, Supabase, OpenAI API

- Built and deployed a full-stack SaaS platform for creating interactive skill and dependency graphs with persistent graph state and progress tracking.
- Integrated the OpenAI API to generate structured JSON graph data and support AI-assisted tree creation.
- Developed interactive node editing, completion tracking, assessments and graph-based dependencies within a visual canvas.

UK Bus Network Optimisation | Python, Graph ML, Geospatial Data

- Developing a graph-based system for analysing UK bus networks, modelling routes and stops to investigate coverage, route overlap and network dependencies.
- Developing optimisation methods and interactive visualisations to evaluate proposed network changes and their trade-offs.
- Applying graph machine learning concepts to a real-world transport network.

Automated Web Crawler | Python, Selenium, BeautifulSoup, APIs

- Developed an automated crawler to collect and filter public TikTok video content from a target account.
- Integrated API-based data retrieval with Selenium and BeautifulSoup to automate collection and processing.
- Added tagging and metadata processing to produce structured datasets for downstream machine-learning model training.

smallTalk | Next.js, Redis, Recharts, WebSockets

- Won 1st place at the LFG Hackathon as part of a four-person team by developing a real-time café social incentive platform.
- Implemented one-time customer pairing codes and real-time communication, with paired customers receiving a 10% discount.

TECHNICAL SKILLS

Languages: *Python, Java, JavaScript, TypeScript, C++, C#, SQL*

Frameworks & Libraries: *Next.js, React, Flask, PyTorch, Pandas, Selenium, BeautifulSoup, Websockets*

Tools & Platforms: *Git, GitHub, Docker, AWS, Supabase, Vercel, OpenAI API, Redis*

ACHIEVEMENTS

Winner, LFG Hackathon | 1st place for developing a social isolation combatant incentive system for cafés | 2026

Winner, University of Manchester Quantitative Trading Hackathon | 2025

Awarded a cash prize for developing a quantitative trading solution in a team under competitive constraints.

Hackathon Participant | 2024

Gold Certificate and Distinction, University of Oxford Bebras Challenge | 2021, 2023

Computer Science Academic Excellence Award | 2021
